

Project 1 — Rule-Based AI Chatbot

About

Built a Rule-Based AI Chatbot using pure Python. Uses a dictionary as its knowledge base, sanitizes user input, runs in a continuous loop, and exits cleanly on command.

Key Concepts Used

- `while True` loop — Keeps the chatbot running continuously
- `.lower().strip()` — Sanitizes user input for accurate matching
- Python Dictionary — Stores all predefined question-answer pairs
- `.get()` Method — Safely looks up input with a fallback default response
- `break` statement — Cleanly exits the loop on 'exit' command

Program Output

```
=====
Welcome! I am RuleBot 🤖
Type 'exit' anytime to stop chatting
=====

You: hello
Bot: Hey there! How can I help you?
You: good morning
Bot: Good Morning! Hope you have a wonderful day!
You: bye
Bot: Goodbye! Have a great day!
You: exit
Bot: Goodbye! See you next time!
PS E:\INTERNSHIP>
